

Slide 1 – Title Slide

DevOps Training Progress – Checkpoint 2

Sufi Hassan Asim

Period: Feb 9 – Apr 10, 2026

Checkpoint Date: April 2026

Slide 2 – Overview Since Last Checkpoint

- Worked across multiple projects focusing on **CI/CD, cloud infrastructure, and deployments**
- Strong involvement in **pipeline debugging, research, and operational support**
- Contributed to **Git migration from CodeCommit to GitLab**
- Supported **production systems and database operations**
- Continued **AWS learning and hands-on practice**
- Started working on **AI-driven development concepts and DynamoDB practical implementation**

Slide 3 – CI/CD & Pipeline Work

- Worked on pipelines across DEV, UAT, and PROD environments
- Conducted research and supported in addressing:
 - Dependency-related issues
 - Timeout behavior
 - Disk space constraints
 - Node.js version compatibility
- Contributed to improving pipeline structure:
 - Clean dependency installation
 - Better build flow organization
 - Updated CodeBuild environments

Slide 4 – Continuous Support & Issue Handling

- Regularly involved in **day-to-day support across projects**

- Conducted troubleshooting and research for:
 - Deployment failures
 - Environment configuration issues
 - IAM and permission-related behavior
- Supported team members in unblocking tasks
- Followed existing patterns in codebase to ensure consistency

Slide 5 – Miracle Morning Migration

- Contributed to migration of 5 repositories from CodeCommit to GitLab
- Supported setup of:
 - GitLab repositories
 - AWS connection integration
 - Pipeline source updates
- Conducted research and supported in handling:
 - IAM permission requirements
 - Build environment compatibility
 - Deployment and environment configuration
- Ensured smooth transition with working pipelines post-migration

Slide 6 – Production & Infrastructure Work

- Executed approved queries on production RDS after confirmation
- Worked on:
 - Lambda and SQS deployments
 - DynamoDB access and IAM policy configurations
- Nova project support:
 - Managed secrets (adding and updating values in AWS Secrets Manager)
 - Added and configured environment variables for application usage
 - Supported SSL and domain setup
 - Conducted research and support for CloudFront behavior and signed cookies
 - Supported S3 access configuration

Slide 7 – DynamoDB Practice & Research Work

- Built a **DynamoDB-based e-commerce practice application** for hands-on learning

- Stack used:
 - Backend: Node.js / Express (TypeScript)
 - Frontend: Vite-based SPA
- Local setup:
 - In-memory DB simulating DynamoDB behavior
- AWS-ready design:
 - CDK stack with DynamoDB tables, GSIs, Lambda, API Gateway, and CI/CD

Learning focus:

- Table design and partition/sort key structure
- GSI design for different query patterns
- Query vs scan behavior
- Capacity handling and throttling
- Conditional writes and validation
- Data modeling for orders, carts, and products
- Monitoring request usage and errors

Slide 8 – Communication & Collaboration

- Improved communication practices:
 - Started sharing **regular progress updates**
 - Provided updates in **cloud team group and to Hazar**
- Increased interaction within office:
 - Engaged more with other developers across the company
 - Regular discussions with fellow GTOs
- Actively:
 - Reached out to Hazar to ask if any tasks were available during waiting periods
 - Shared ideas and approaches where relevant
 - Supported onboarding and queries of new team members

Slide 9 – Learning, Current Work & Next Steps

Learning Progress:

- ECS troubleshooting (completed)
- EBS troubleshooting (completed)
- DynamoDB troubleshooting (ongoing)

- Cloud Practitioner (ongoing)

Current Work:

- MM-Enterprise QA pipeline pending update
- AI-Driven Development Lifecycle research (in progress)

Next Steps:

- Continue support on pipeline tasks
- Progress AWS learning
- Continue AI SDLC research and practical understanding
- Increase contribution in ongoing tasks
- Maintain consistent communication
